

Fe-asy Checker 26

*M/E Scavenging Drain Analysis
(SDA)
Onboard Test Kit*

for your Safe Navigation & Efficient Consumption!

Portable and able to analyze on board!

Easy Analysis! Low running cost!

Analyze Ferrous &

Non-Ferrous Fe Content!

Safer without use of acid!

“Fe-asy checker 26” can make a highly accurate analysis of iron (both magnetic & non-magnetic) in the scavenging drain on board. You can detect abnormal condition earlier. In recent years, many instance of low-temperature sulfuric acid corrosion (Water content inside the cylinder can combine with sulfur from the fuel oil to cause corrosion and premature engine wear) have been reported due to an increase of design pressure inside the cylinders. This increases the need for measuring not only conventional magnetic iron particles, but also the total iron content including iron ions!
